

## COVID-19 UPDATE

10 June 2021

### PHARMACY PROCUREMENT

#### RE: COVID-19 VACCINE: SUPPLY OF NEEDLES AND SYRINGES

The needles and syringes (for both dilution and administration) required for the COVID-19 vaccination programme of Mediclinic are currently being managed centrally to ensure that stock is being purchased and distributed optimally.

Stock is being procured centrally through Corporate Office and will be distributed through this system as well.

Allocation of the stock will be based on the following principles:

- Vaccine allocations as per Department of Health
- The amount of doses administered/charged

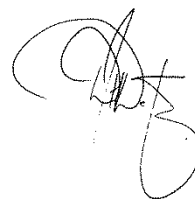

The stock provided by Corporate Office is not to be used for normal operations within the hospitals and is to be preserved for the vaccination centre only.

In this manner, we will ensure that there are minimal disruptions of the programme due to availability of needles and syringes.

Kind regards
